MONTESA, Elaine Bernadette

ACKNOWLEDGEMENT

In the development of **100 DAYS IN METRO MANILA**, the development team would like to convey their heartfelt thanks to all who contributed time and assistance prior to the completion of the Game Design Document.

First and foremost, to our Almighty God for giving endless blessings throughout the process of our Game Design Document by providing and granting us the opportunity and the capability to accomplish this document successfully.

To our IT0071 Game Studies Advisor, Mr. Ronel F. Ramos for his patience, devotion, and wisdom that he shares with us. Studying under his supervision was a great privilege and honor. The development team is incredibly grateful for his guidance.

Special thanks to the development team, each and every member who invested time, effort, and cool ideas that brought this game to life. From a single scratch of an idea, to conceptualizing, to documentation, to designing, to prototyping, to sound editing, to programming, to animating, and every single aspect that makes this game alive.

Finally, we would like to thank everyone who inspired and supported the development of **100 DAYS IN METRO MANILA**. From the environmental advocates who raise awareness about air, water, and land pollution, to the local communities and individuals who care for their surroundings, your dedication motivated us to develop a game that not only entertains but also educates. The developers hope this project encourages players to reflect on their actions and take part in protecting and restoring the environment, just as the ex-deity who lost their mortality after angering the allfather that strives to restore a post-polluted Metro Manila within the game.

PREFACE

METRO MANILA is a bustling city full of life, energy, and culture. But what happens if citizens of the metropolitan completely neglect their environment? **100 DAYS IN METRO MANILA** imagines a post-polluted version of the city, where air, water, and land pollution have taken over, showing what the future could look like if humans ignore their responsibility toward the environment.

In the game, players take on the role of an ex-deity who lost their mortality after angering the allfather, cast down into a devastated **METRO MANILA**, tasked to restore its natural beauty within one-hundred (100) in-game days. Along the way, the ex-deity has nothing, no equipment, a weak body, and is affected by the pollution of the city because of human neglect. The ex-deity must survive by exploring the city, completing main quests that restore the natural beauty, loot scraps that are scattered around, face monsters that symbolizes or represent human neglect, and solve environmental puzzles to become knowledgeable about the care for the surroundings.

This **GAME DESIGN DOCUMENT** (GDD) serves as the blueprint for creating the game. It covers everything from the concept and story to gameplay mechanics, art and audio design, and technical details. By documenting our vision, we ensure that the development team has a clear plan to bring the world of **100 DAYS IN METRO MANILA** to life.

At its heart, the game is not only meant to entertain. It is a reminder that the health of our environment depends on the choices we make every day. Although, it is given that pollution cannot be eliminated but we can maintain it to make our world healthy enough. Through gameplay, storytelling, and immersive experiences, we hope players will gain awareness, empathy, and a sense of responsibility toward the city they live in.

MEET THE TEAM

ALAS QUATRO is a group of passionate indie developers with a goal of creating games that are both fun and meaningful. We love turning ideas into playable experiences and making games that can inspire and help the community.

For **100 DAYS IN METRO MANILA**, we worked together to create a game that focuses on awareness about pollution, human responsibility, and caring for the environment. Each member brings their own skills, from managing the project, designing assets, programming and animation, sound design, to documentation to bring this world to life.

ALAS QUATRO assures that our game not only entertains but also encourages players to think about their actions and how they can make a difference in the real world.

CONFIDENTIALITY DISCLAIMER

For a successful client-student collaboration, both parties need to trust that private information will be handled carefully. This agreement protects both the client and the students from sharing sensitive details during the project development.

We, **ALAS QUATRO**, commit to keep all discussions with our client, _____ private unless given permission to share them. We can talk about project concerns with our Project Adviser, who will also keep information confidential, except in situations where disclosure is necessary to ensure personal safety.

I understand that a copy of this agreement will be given to our client, and we will also receive a copy of his/her signed agreement.

CHAPTER I: INTRODUCTION

Purpose of the Document

This Game Design Document (GDD) serves as a comprehensive guide for the development of *100 Days in Metro Manila*. It is a guide for the whole team to make sure that everyone is on the same page in developing the game. This will keep us in order and ensure the final game is as envisioned.

Goal and Objectives

General Goal

- To develop *100 Days in Metro Manila* which is a three-dimensional role-playing android game that focuses on major pollution (air, water, and land) awareness in Metro Manila, while encouraging the players the responsibility for the environment through immersive gameplay.

Specific Objectives

- To create a mobile role-playing game where players explore a post-polluted Metro Manila.
- To include gamified elements such as quests, time limits, environmental progression, and <> to make learning about pollution engaging.
- To design the game using human-centered design (HCD), ensuring it is easy to play and intuitive for the target audience.
- To raise awareness towards empathy and responsibility by showing the effects of pollution on the city, its people, and the environment when it is neglected.

Game Statement

100 Days in Metro Manila follows an ex-deity who has lost their mortality after angering the allfather cast into a post-polluted Metro Manila as punishment where it is a world shaped by prolonged human neglect. The ex-deity must restore the

devastated city within a limited timeframe of one hundred (100) days as an act of redemption.

CHAPTER II: GAME OVERVIEW

Title

The title of the game *"100 Days in Metro Manila"* was carefully chosen to reflect both the gameplay experience and the setting. We chose "100 Days" because it sounds natural and exciting, not too long like a year, and not too short like 30 days. In the game, these are in-game days that progress quickly, so the full playthrough takes about thirty (30) - forty-five (45) minutes to complete.

The choice of "Metro Manila" as the setting highlights one of the most highly urbanized areas in the Philippines, where environmental issues such as air, water, and land pollution are especially prominent. Notable locations like Tondo, the Pasig River, and Sampaloc (U-Belt), serve as key in-game areas. This setting helps show the consequences of human neglect and makes the story more relatable.

High Concept

100 Days in Metro Manila is a role-playing game set in a post-polluted version of Metro Manila, where players control an ex-deity tasked with restoring the city's air, water, and land ecosystems within 100 in-game days. Players explore notable areas

that are inspired by Tondo, the Pasig River, and Sampaloc, solve environmental puzzles, collect resources to survive, and face monsters that symbolizes or represents human neglect. Players will be faced with various challenges, such as managing time and resources, while facing pollution threats before the 100-day limit ends.

What makes it stand out is its combination of role-playing, action-adventure, survival mechanics, and environmental storytelling. The game mixes exploration, progressive quests, combats, and environmental puzzles delivering a meaningful message regarding pollution awareness and human responsibility. 100 Days in Metro Manila is not just entertainment, it's an enjoyable and immersive way to learn about the consequences of neglecting the environment.

Genre & Subgenre

- Main Genre: Role-Playing Game (RPG)
- Subgenre: Action-Adventure, Survival, Narrative-Driven Game, UN SDG Game-Inspired

Platform

- Mobile (Android)

Languages

- Text: English (menus, subtitles, dialogues) to support international players.
- Voice-Overs & Environmental Sounds: Filipino (character dialogues, reactions, ambient city sounds) to maintain cultural authenticity and immersion.

Target Audience

- Teenagers and adults (ages 13+) who enjoy role-playing, action-adventure, and narrative driven games.
- Gamers that are interested in environmental issues, urban life, or local culture.

Unique Selling Points

- Combines fun, immersive, action-packed gameplay with meaningful realizations.
- Explores a post-polluted Metro Manila, featuring real areas affected by pollution.
- Features time limitations in-game days to create a sense of urgency and replayability.
- Short but immersive gameplay perfect for mobile sessions, balancing entertainment and learning.

CHAPTER III: GAME MECHANICS

Overview

The mobile game mechanics of 100 Days in Metro Manila defines how the playable character interacts with the game world, how time progresses in-game, and how their action affects the fictional environment of key areas from Metro Manila. These mechanics are emphasized below and highlights the significance of responsible action through structured game's rules and systems.

Camera Perspective

100 Days in Metro Manila will utilize a third-person camera perspective, so that the players will clearly see their character while also viewing the surrounding environment. This perspective is fit for the game's theme to help players navigate urban areas, engage in combat, and observe environmental details.

Rules & Systems

In-Game Day System

100 Days in Metro Manila follows a 100 in-game day limit. Every action such as completing quests, exploring areas, or engaging in combat consumes a portion of in-game time. Each day passes quickly which allows the full game experience to last approximately 30-45 minutes in real time.

Inventory & Looting System

100 Days in Metro Manila includes an inventory system for players to collect, store, and use items needed for survival, combat, and restoration of post-polluted Metro Manila's environment. The player begins the game weakly which encourages them to gather scraps/resources that can be used in the game. With inventory management, it directly affects combat ability, quest progression, and environmental restoration within the timeframe.

Environmental State System

100 Days in Metro Manila defines each stage's environmental condition meter and how it affects the player:

- Polluted - This will be the default state of a stage. Players will experience debuffs to their physical performance.
- Recovering - This state is defined as the intermediate state where environmental conditions begin to improve. Players will experience reduced debuffs to their physical performance.
- Restored - This state is defined as the optimal state. Players will experience normal capacity to their physical performance.

Player actions directly influence those states by completing cleanup quests and restoring key locations that will improve the environmental condition of a stage.

Player game progressions towards each stage will receive severity of pollution, meaning the debuffs in their polluted state are stronger than the earlier stages.

Stage	Pollution Type	Polluted State	Recovering State
Stage 1	Air	Movement Speed = -2.5%	Movement Speed = -1.0%
Stage 2	Water	Movement Speed = -4%	Movement Speed = -2.5%
Stage 3	Land	Movement Speed = -6.5%	Movement Speed = -4%

Resource Farming & Stage Revisit System

100 Days in Metro Manila defines a resource farming and stage revisit system where once a stage is restored, players may revisit the area to gather additional resources for survivability. This allows the players to take shelter in a safer/restored environment with reduced threats and common enemies to loot items from and prepare equipment before progressing to more challenging stages.

Stage	Enemy	Pollution Type	Loot Items	Drop Chance
Stage 1	Smog Snatcher	Air	Healing Item, Light Weapon	Common
Stage 1	Stubb	Air	Healing Item, Light Weapon	Common
Stage 2	Gullies	Water	Adrenaline Potion,	

			Healing Item, Light Weapon	
Stage 2	Sewer Lurker	Water	Adrenaline Potion, Healing Item, Light Weapon	
Stage 3	Trashling	Land	Advanced Healing Item, Adrenaline Potion, Heavy Weapon	
Stage 3	Nuclear Diaper	Land	Advanced Healing Item, Adrenaline Potion, Heavy Weapon	

Dialogue System

100 Days in Metro Manila defines a dialogue system for interactions and cutscenes

Feedback System

100 Days in Metro Manila provides constant feedback to guide the player:

- Visual Feedback –
- Audio Feedback –
- UI Feedback –

Save and Load System

100 Days in Metro Manila provides a saving and loading system to further support mobile gameplay and player convenience to ensure their progress without restarting.

The load system allows the players to resume from their recent save point, preserving character progress and flags.

Player Controls

100 Days in Metro Manila's game controls are designed for Android mobile devices and use an on-screen touch control system for intuitive gameplay.

Controls	Description
Virtual Joystick (Left Side)	• Moves the player in all directions. • Supports exploration, dodging, and positioning in combat.
Attack Button (Right Side)	• Executes attacks against the currently locked target.
Camera Control Zone	• Touch and drag to rotate the camera independently of the player movement. • Keeps the camera centered on the player.
Loot / Inventory / Quest UI	• Lootable items in range show a clickable UI box. • Clicking collects the item and adds it to inventory. • Tapping an NPC triggers interaction • Tapping an enemy locks the target, displaying its name and HP.

Objectives & Win/Loss Conditions

Objectives

100 Days in Metro Manila's main objective is to restore the beauty of metro manila within one-hundred (100) in-game days. But upon achieving restoration, the playable character will face challenges that can hinder them from restoring the post-polluted world to its normal state because of human irresponsibility.

Win Condition

100 Days in Metro Manila's win condition is when the player has fully restored all stages and completed all story quests within one-hundred (100) in-game days timeline.

Loss Condition

100 Days in Metro Manila's loss condition is when the player did not manage to completely restore each stage and exceeds from one-hundred (100) in-game days timeline.

CHAPTER X: GAME TECHNICAL DESIGN

Throughout the development of *100 Days in Metro Manila* it is fueled by a combination of technological tools and programming languages that will enable us to breathe life into the game's world, characters, and game systems. Below is a comprehensive description of the main tools and languages to be used in developing the game.

Game Engine & Development Tools

Unity Engine - it is the main software which we will use to create *Mare: The Game*. It allows us to build or import 3D models from other modeling software, incorporate animations, and most importantly, apply real physics (e.g., how things move and how characters react when attacked). It also enables us to implement sound effects, lighting, and special effects so the game springs to life and is more interactive.

Visual Studio 2022 Community - an IDE (Integrated Development Environment) that integrates with Unity, so when we write scripts for characters, we can run those scripts in Unity directly. It also helps us maintain the structure of the game and is easier to debug.

Programming Languages

C# - it is the main programming language that we will be utilizing to handle all of the *100 Days in Metro Manila* mechanics.

CHAPTER XI: GAME MODEL DEVELOPMENT

Tools & Software Used

Autodesk Sketchbook - used for rapid conceptualization of assets and characters.

Krita - used for 2D Design assets and characters.

Autodesk Maya – used for 3D designing software and animation.
